

PC-47 Error in ADPICS

Users have, at times, experienced problems while processing ADPICS 8010 Advice of Change.

The error message received was "PC-47 - Invoice Referenced by Purchase Order Not On File." ADPICS 1530 Invoice by Purchase order Inquiry showed a blank line. This happened when a user deleted an invoice in which some of the fields were changed. The deletion did not completely remove the invoice from the tables.

The software has been fixed so that the invoice is removed completely from the tables when it is deleted.

There should be no new occurrences of the PC-47 error. At a later date, MAIN will do a data correction for the existing purchase orders that have this error.
